

Linking to Electronic Medical Records

Export data from MicroMD to popular EMR packages

- Medamation
- MediNotes
- Praxis
- PowerMed
- Turbo-Doc
- Mohs Trax
- And many more

MICROSYS has designed numerous conduits that allow the transfer of information that is already populated in the MicroMD system to be exported directly into third-party electronic medical records programs.

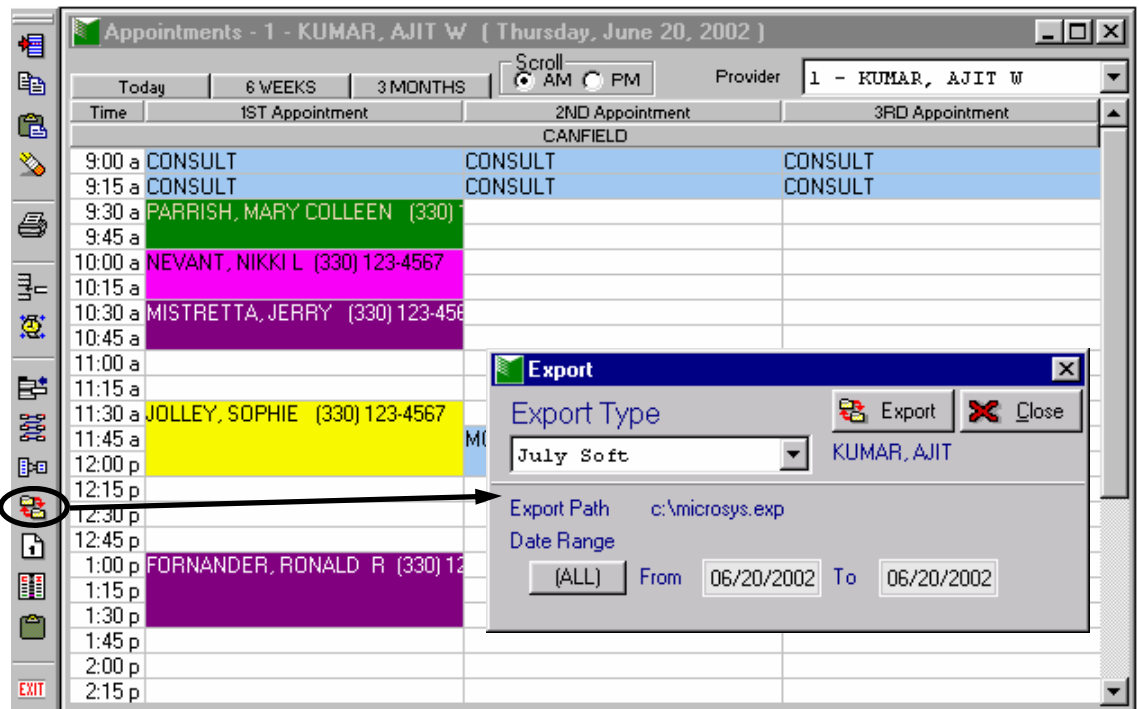

MICROSYS is always working with other 3rd party software companies...

July Soft's Automated Calling Program

Links to MicroMD™

- Advance Calling
- Multi-line Capability
- Unlimited Messaging
- Custom Calling Options
- Email Capability
- Multi-provider scheduler and true calendar reports
- Automatically schedules recurring appointment calls
- Lifetime Warranted Voice Hardware
- True 32-bit Windows®-based calling system with email messaging capability

MICROSYS has effectively designed an export tool that allows all the appointment information for a specified period of time to be exported from MicroMD into the July Soft ReminderPro automatic telephony program. Send your custom messages at times you choose using the ReminderPro software. Your patients can be notified of upcoming appointments after office hours freeing up staff time for more productive tasks. The reporting capabilities of the ReminderPro program allows your office to track and confirm if your patients received a message, if a message was left on an answering machine or if the call was unsuccessful in reaching anyone.

Available as an optional add-on to the MICROMD practice management program

Effective Communications by Telephone or Email

ReminderPro calls automatically in your own voice, delivering natural-sounding appointment reminders and an unlimited range of messages.

ReminderPro pays for itself within weeks of installation by preventing appointment "no-shows", saving countless staff hours, and eliminating expensive (and less effective) mailed reminders.
