

## PDA Interface

- Enter Hospital Rounds
- Enter Charges
- Import Charges into Auto Charge Posting Module
- Synchronize Selected Diagnosis and Procedure Codes from MicroMD to PDA
- Synchronize Referring Doctors from MicroMD to PDA

**M**icroMD has the capability to connect to a PDA (personal digital assistant) device so that the user can modify hospital rounds and enter charges while at a service facility. The information can then be synched into MicroMD at a later time. Diagnoses, procedures, and referring doctors can be downloaded to the Palm device.

**H**ospital Round information can be synched from MicroMD into the PDA device, which is then taken by the provider to the service facility. Also, new hospital rounds can be created at the service facility. Using the PDA saves the practice valuable time by enabling the provider to enter information while at the hospital. The hospital rounds track the patient's room number, admission date, discharge date, hospital unit (such as ICU), the frequency of visits required by the provider, the referring doctor, and the consulting doctor.

Note

**H**ospital rounds that were entered at the service facility can then be synched into MicroMD back at the office. Once you synch the information into MicroMD, you still have the option to modify the information. Also, you can select to import only specific hospital rounds into the system.

# PDA Interface...Continued

**C**harges can be posted using the PDA device. You enter diagnosis codes, procedure codes, the place of service, and any necessary modifiers. When synchronized with MicroMD, you have the option to import the charges into the **Auto Charge Posting** module or print a **PDA Charges Report** to check for errors before posting.

**C**ustomize your available choices by selecting the diagnosis codes, procedure codes, and referring doctors to include on the PDA. Also, you can choose specific "common" codes to appear at the top of the list so the provider doesn't have to scroll through all the available options to select the desired code.
